OUR VISION OF TRUE COMPUTING POWER

Unlike paper money, Bitcoin and other cryptocurrencies are generated mathematically. Our cloud miners provide the computing power needed to generate new Bitcoins and secure the Bitcoin network. Bitcoins are not managed by any central government or banks that decide the future of the system. The Bitcoin system offers freedom.

Freedom that we want to make available and easily accessible to everyone. Today, Bitcoin is the most secure computer network on the planet, almost impenetrable! The reason for this is hash power.

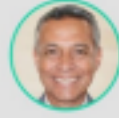

Hash power is used as the computing power that miners offer to the Bitcoin network, which requires specialized high-performance computers that would be an expensive purchase for individuals.

To solve this problem, Miners-Hub offers the required hardware as a service. For anyone around the world. Our miners work in huge clusters and are already actively mining Bitcoins before you even sign up. This gives us an efficient way to use needed power and provide you with real hardware power at no additional cost.

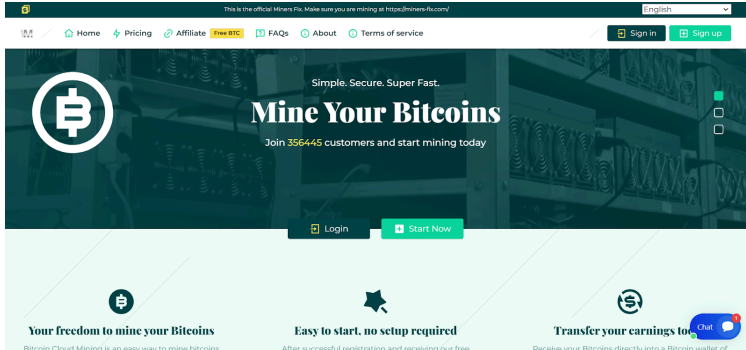

"BITCOIN IS NOT ONLY A CURRENCY OF THE FUTURE, BUT THE REVOLUTION OF TRADITIONAL CURRENCIES AND BANKING SYSTEMS."

"Bitcoin is not only a currency of the future, but the revolution of traditional currencies and banking systems."

— James Casey, CEO of Pelham Ag

FAQ

How does the mining work?

Miners Hub has provided mining machines that allow you to rent these miners around the world. By exchanging cryptocurrencies, you can access a multitude of miners that will allow you to start mining without the hassle of buying the equipment you normally need!.

What payment method can i pay with?

Major cryptocurrencies; Bitcoin, Litecoin Tether, Ethereum and Tron.

Are there any setup fees or delays?

In short, no. Thanks to our highly automated system, there are no additional costs, fees or waiting times for you. Neither for the initial setup nor for future hardware upgrades.

What do I need to consider when making transactions?

As already mentioned, we do not charge any fees. However, this does not apply to the crypto network. Every crypto transaction requires fees, which are sent to the network. Depending on the amount of the indicated fees, a transaction will be delayed between 5 and 50 minutes. This mostly applies when buying new hardware power with BTC and transferring BTC to an address of your choice.

How much hardware power can a single customer purchase?

Each customer can purchase a minimum of \$100 and a maximum of \$500,000 per order. Gifted bonus, affiliate commission and mining profits are not affected by this.
